REMARKS										
Name of the responsible beekeeper				Official apiculture registration number				Signature		

---

<sup>1</sup> All apiaries must be individually identified. An apiary is defined as a group of hives located in a specific site (sharing biophysical and climatic characteristics) that will profit from the floristic resources around. An apiary can be a group of nearby trees holding several hives.

<sup>2</sup> If the containers are coded, the beekeeper may include this information as well.
